## Appendix F Worked Examples of Development Areas Tables

This appendix provides a note of explanation on how to interpret the development tables in Chapter 6 - Development Areas. Two sites have been selected to illustrate the various ways in which the figures in the development tables can be quantitatively applied to a site. The following site typologies have been selected:

Sample Site 1: High Intensity Employment Site
Sample Site 2: Res2 Residential Site
Sample Site 1: High Intensity Employment Site

| High Intensity Employment Site <br> Site Development Parameters |  |  |
| :--- | :---: | :---: |
| Site Area | $\mathbf{0 . 4}$ ha |  |
| Development Quantum Range Sq.m | Min | Max |
| Plot Ratio | 6000 | 8000 |
| Site Coverage | Min | Max |
| Building Height in Storeys | $1: 1.5$ | $1: 2$ |

## Example 1

Proposed Quantum 8000 sq.m
Plot Ratio 1:2
Site Coverage $50 \%$
Building Height 4 storeys

## Exame

Proposed Quantum 7500 Sq.m
Plot Ratio 1:1.9
Site Coverage $40 \%$
Building Height 5 Storey

## xample

Propose Quantum 6000 sq.m
Plot Ratio 1:1.5
Site Coverage 50\%
Building Height 3 Storeys
The calculated examples outlined above illustrate that the proposed minimum and maximum quantum of development and resultant plot ratio are the primary limitations for development on a site. Once these are determined there is a level of flexibility in the design with regard to the height and site coverage proposed for a site.

As Example 1 illustrates above, the decision to construct the maximum development quantum does not mean that you also need to apply the maximum site coverage or maximum building height to the development. Once a proposed development falls within the parameters of the Quantum of Development, Plot Ratio, Site coverage and Building Height designated for a site, it will be in accordance with the quantitative development criteria for that ite This methodology applies to Commercial Uses, Town and Village Centre ste. Tis methodology applies to Commercial Uses, Town and lage Cent lots. These parameters have been set regard to the design of proposed development while guiding the overall design throughout the Planning Scheme Area.

## Sample Site 2: Res2 Residential Site

Each residential development plot has been assigned a net residential density ange. The intensity of development across a plot has been indicated by a graduation of colour, as indicated on Maps 6.1-6.8. It should be noted that portion of a development plot may be developed at a lower density, while another portion of the same plot may be developed at a higher density, than the density range on the plot.
or example, a Res 2 plot has a density range of $45-70$ units per ha, however a portion of the site may need to be developed at a density of 40 units per ha due to site constraints, while another portion may be developed at 85 units per ha.

The important factor is that the average net density of a development plot falls within its assigned net density range. While adhering to the development plot's other assigned development parameters such as maximum heights.

The following are four examples of how a density range may be applied theoretically across a site. All four examples have been based on a Res2 Site with a net area of 4.6 ha and a colour graduation of dark to light in a north easterly to south westerly direction.

Res2 Residential Site
Example 1 Average Proposed Density 70 units per Ha. Site Area

## 4.6 ha

## Net Density Range

45-70 units per Ha

## Colour graduation

North East to South West, Dark to Light

## Breakdown as follows

2 ha at density of 90 units per ha $=180$ units
2.6 ha at density of 55 units per ha $=143$ units

$$
\text { Total }=323 \text { units }
$$

Average Development Plot Density: 70 units per ha.

| Res2 Residential Site  <br> Example 2 Average Proposed Density 60 units per Ha.  <br> Site Area  <br> Net Density Range  <br> Colour graduation  <br> Breakdown has follows to  <br> 2 ha at density of 85 units per ha $=170$ units per Ha  <br> 2.6 ha at density of 40 units per ha $=104$ units  <br> Total $=274$ units  |  |
| :---: | :---: |
| Average Development Plot Density: 60 units per ha |  |

## Res2 Residential Site

| Example 3 Average Proposed Density 50 units per Ha . |  |
| :---: | :---: |
| Site Area | 4.6 ha |
| Net Density Range | $45-70$ units per Ha |

## reakdown as follow

3 ha at density of 60 units per ha $=180$ units

1. 6 ha at density of 30 units per ha $=48$ units

## Total $=228$ units

Average Development Plot Density: 50 units per ha

Res2 Residential Site
Example 3 Average Proposed Density 45 units per Ha.
Site Area
4.6 ha

Net Density Range
45-70 units per Ha
Colour graduation
st to South West, Dark to Ligh
Breakdown as follows
1 ha at density of 65 units per ha $=65$ units
3.6 ha at density of 40 units per ha $=144$ units

$$
\text { Total }=209 \text { units }
$$

Average Development Plot Density: 45 units per ha
