

What is the benefit of planting native woodlands?

Creates new habitats and ecological corridors

Enriches soils and ground floor canopies

Improves natural flood defenses and water retention

Helps improve air quality, biodiversity, as well as human health and wellbeing

LET'S PLANT SOME TREES!

DLR Parks are planting community woodlands and need your help!

We need volunteers to help plant 1500 native Irish woodland trees at Cluny Park.

You can make a lasting impression in your local community for generations. Encourage neighbours, friends and family to join us. We recommend you bring warm clothes, sturdy shoes, gloves, a garden trowel and some water and snacks

The trees will be very young native trees, densely planted and comprised of species such as Oak, Birch, Alder, Spindle, Hawthorn, Hazel, providing habitat for birds and pollinators, improving air quality and enriching the natural environment.

WHEN: SATURDAY 24TH FEBRUARY
WHERE: CLUNY PARK
TIME: 10AM - 3PM

For more information on how to get involved please email: parksconsultations@dlrcoco.ie before the 06th February 2024
