Trom

Colour: Creamy
White flowers with
purple berries.

Leaves: Elder
contains 5-9
leaves that are
toothed. They are
part of a
deciduous tree or
shrub.

Habitat: Found in
woodlands,
hedgerows and
scrubs

Blooming Time:
June- September

Poisonous: No

Common Poppy

Cailleach dhearg

Colour: Bright scarlet with overlapping petals

Leaves: pinnate leaves and coarse toothed. Tall stems with hairs

Habitat: Roadsides, gravel pits and arable land.

Blooming Time: June-September

Poisonous: No

Keeping your garden bee friendly

Hanging Baskets and Window Boxes

If you don't have a garden to plant pollinators, add some window boxes or hanging baskets with pollinator friendly flowers to your windows.

Slow to Mow

Reducing the amount you mow your lawn is the most cost effective way to help reduce a decline in pollinator species.

Why not leave a patch of grass in your garden that you no longer cut? Bumble bees love a patch or area of long grass to use as a shelter during nesting periods. These patches will also create a short meadow that soon will be blooming with wild flowers and species that pollinators love.

Plant some Pollinator Friendly Herbs

Plant a herb patch in you garden. The following herbs are pollinator friendly and make a great addition to your kitchen for cooking!

- Rosemary
- Chives
- Fennel
- Mint
- Oregano
- Sage
- Thyme
- Mint

Definitions

Wildflowers:

A wildflower means a flower that grows naturally in the wild and has not been planted intentionally

Habitat: is the place where a plant or animal naturally or normally lives and grows.

Toothed: A toothed leaf refers to a leaf that has an irregularly notched margin

Definitions

Pinnate: A plant having leaflets arranged in a feather like shape, with leaflets found on either side of the stem in pairs opposite each other.

Basal: Basal leaves are leaves that grow from the lowest part of the stem

Grasslands: These are areas that are dominated by grasses as the main form of vegetation.

Definitions

Hedgerows: A hedgerow can be defined as a line of closely spaced woody shrubs to form a continuous barrier.

Heath: This is a shrubland habitat. It is often characterised with infertile acidic soils and contains low growing woody vegetation.

Deciduous: This is a tree or shrub that sheds its leaves annually.
